Available immediately | Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Full-stack developer with hands-on experience designing, building, and deploying production-grade web applications and systems. Strong across the MERN environment, owning end-to-end delivery—from designing polished, user-friendly frontends to deploying and maintaining production-grade Backends while taking responsibility for codebase architecture bug fixing, and continuous improvements. Currently transitioning from conventional app development to AI Integrated applications, Applying LLM integrations and strengthening AI/ML fundamentals to deliver measurable results.

TECHNICAL SKILLS

Languages: JavaScript, Python

Frontend: React.js, HTML, CSS

Styling: Tailwind CSS, Bootstrap

Backend: Node.js, Express.js

Databases: MongoDB, SQL

Testing: Postman, Selenium

Deployment: Vercel, Render, AWS

DevOps: Git, GitHub, Docker, CI/CD (GitHub Actions)

PROJECTS

Resumify – Resume Builder

GitHub | Live Link

- Developed a full-stack career platform with dedicated experiences for job seekers, recruiters, and administrators.
- Built a resume-format scan to flag structural ATS issues such as multi-column layouts, embedded images, non-standard fonts, and missing text layers.
- Created a resume builder with 11 templates, structured input forms, live previews, and PDF + ATS-friendly DOCX exports; added a resume library for saving and reusing resumes across reviews, AI chat, and cover letters.
- Developed recruiter workflows for job publishing, structured applications, applicant filtering, candidate status management, and hiring analytics; implemented AI candidate fit scoring on a 0–100 scale.
- Created online screening tests with pre-checks (camera, internet) and TensorFlow.js face-position monitoring during exams.
- Separated scheduled tasks into a background worker and used database-backed leases to coordinate job execution across instances.
- Added email, in-app, and Web Push notifications, along with an installable Progressive Web App experience.
- Built admin and support tools for user management, recruiter approvals, testimonial moderation, feature flags, audit logs, and AI usage monitoring.

Notewise – AI Study Companion

GitHub | Live Link

- Built a full-stack platform that converts user notes into AI-grounded study assets (summaries, flashcards, quizzes, and chat) with a self-verifying chat system that grounds every answer in the user's own notes.
- Built a multi-format ingestion pipeline (PDF, DOCX, audio, web articles) behind a single normalized interface with PDF page-offset tracking so downstream features (citations, exports) trace content back to the exact source page; hardened auth with rotating single-use refresh tokens to neutralize stolen-session replay.
- Architected a monetization layer with 3 subscription tiers, independently scaled AI-model access/feature limits, and an atomic, race-condition-free credit meter robust under concurrent requests.
- Built an adaptive learning loop where spaced repetition drives weak-topic analytics and triggers AI-generated remediation content from a user's wrong answers.
- Enforced server-side (User/Support/Admin) via middleware, enabling Support workflows (ticket resolution, account lookups) and Admin controls (moderation, refunds) with an immutable audit trail.
- Designed retention features: collaborative Study Rooms, AI-built daily study plans, an exam-prep calendar exportable to any calendar app, and automated reminder/digest emails.

STRENGTHS

Quick learner | Collaboration | Team player | Problem solving | Debugging | Adaptability | Continuous learning | Curious

EDUCATION

Allana Institute of Computer Science

Pune, India

Master of Computer Applications (MCA)

Poona College of Arts, Commerce and Science

Pune, India

Bachelor of Computer Applications (BCA); CGPA: 8.90/10

CERTIFICATIONS

- 0-100 Full Stack Web Development Course — 100xdevs
- Claude Code in Action — Anthropic Academy
- Introduction to Agent Skills — Anthropic Academy
